

London

In light of a few tragedies which recently jolted the global infrastructure industry, combined with the industry's focus on whole-life safety of infrastructure and our endeavours to ensure more resilient and robust Fire Safety Management procedures, it has become imperative for us to overcome knowledge deficiencies related to managing fire safety and associated legal obligations.

ICE London Graduates and Students Committee, in collaboration with British Tunnelling Society Young Members, therefore invites all ICE Members and Non-Members to their safety lecture which would use David Harold's (Fire Safety Manager, London Bridge Associates | Fire Safety Advisor, CSJV, Crossrail C610) extensive experience on shedding light on the current state of Fire Safety Management, legal obligation and good practices.

David Harold has more than 25 years of experience within fire services and fire safety, and works as a Fire Safety manager for London Bridge Associates Ltd. David is also the recipient of NCE Tunnelling Festival 2018's 'Outstanding Contribution to the Industry' award for his work on managing fire safety in underground space.
